

Pull an Image from docker hub and run it in docker playground.

The screenshot shows the Docker Playground interface. On the left, there's a sidebar with a clock showing 03:56:44, a 'CLOSE SESSION' button, and a list of instances. The main area displays a terminal session for an instance named 'cdrikj60_cdrilme3tccg009i1ob0'. The terminal output shows the following commands and results:

```

[rodel] (local) root@192.168.0.13 -
$ docker pull hello-world
Using default tag: latest
latest: Pulling from library/hello-world
2db29710123e: pull complete
Digest: sha256:fa03e786c97f07ef34423fccc0ec2398ec8a5759259f94d99078f264e9d7af
Status: Downloaded newer image for hello-world:latest
docker.io/library/hello-world:latest
[rodel] (local) root@192.168.0.13 -
$ docker images
REPOSITORY    TAG       IMAGE ID       CREATED        SIZE
hello-world   latest    feb5d9fea6a5  14 months ago  13.3kb
[rodel] (local) root@192.168.0.13 -
$ docker run hello-world

Hello from Docker!
This message shows that your installation appears to be working correctly.

To generate this message, Docker took the following steps:
1. The Docker client contacted the Docker daemon.
2. The Docker daemon pulled the "hello-world" image from the Docker Hub.
   (amd64)
3. The Docker daemon created a new container from that image which runs the
   executable that produces the output you are currently reading.
4. The Docker daemon streamed that output to the Docker client, which sent it
   to your terminal.

To try something more ambitious, you can run an Ubuntu container with:
$ docker run -it ubuntu bash

Share images, automate workflows, and more with a free Docker ID:
https://hub.docker.com/

[rodel] (local) root@192.168.0.13 -

```

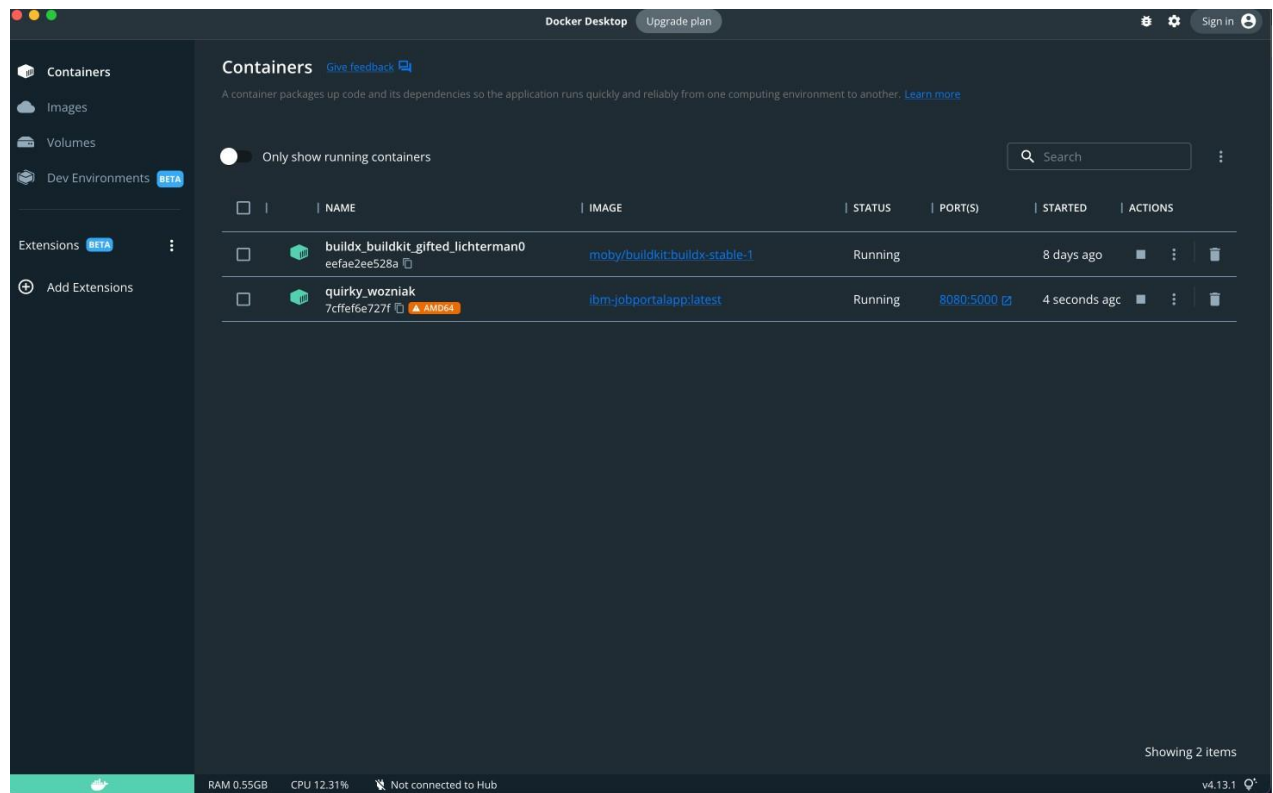

1. Create a docker file for the jobportal application and deploy it in the Docker desktop application.

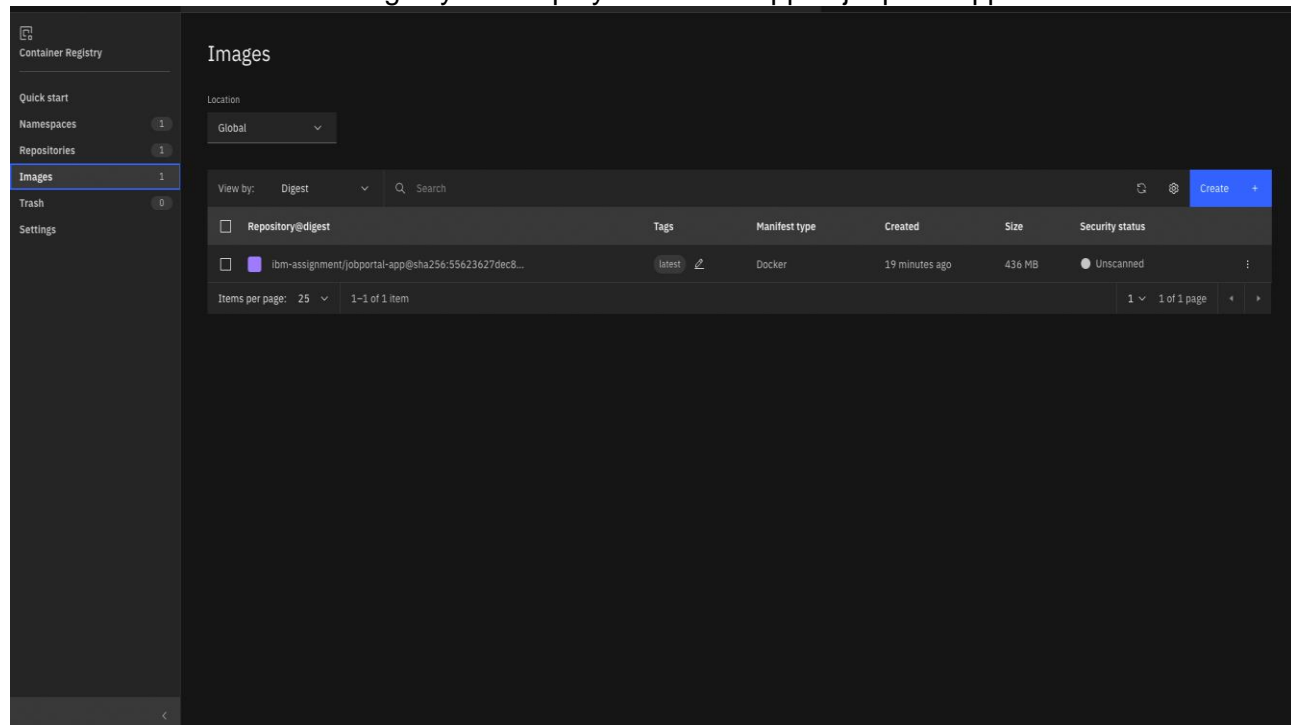

The screenshot shows the Docker Desktop interface. The left sidebar contains navigation options: Containers, Images, Volumes, Dev Environments (BETA), Extensions (BETA), and Add Extensions. The main area is titled 'Images on disk' and shows a list of installed images. The 'LOCAL' tab is selected, displaying a table of images:

NAME	TAG	IMAGE ID	CREATED	SIZE
ibm-jobportalapp	latest	0ec838117a9d	3 minutes ago	1.08 GB
moby/buildkit	buildx-stable-1	71ac63309b0f	about 1 month ago	133.56 MB

The 'moby/buildkit' image is marked as 'IN USE'. At the bottom, there's a section for 'Connect to Remote Content' with options to store and backup images remotely, unlock vulnerability scanning, and collaborate with a team. A 'Sign in' button is available.

2. Create a IBM container registry and deploy helloworld app or jobportalapp.

3. Create a Kubernetes cluster in IBM cloud and deploy helloworld image or jobportal image and also expose the same app to run in nodeport.
